

Scenario: You, a traveler, find to enjoy reading news articles to understand what is going on in the world. You love using devices to read the majority of the news that occurs primarily. However, you experience some technical issues such as the news articles not popping up or the news articles loading too slowly due to bandwidth; this leads you to decide to use the bandwidth experiences app to help solve the issue.

### Tasks

1. Access the full version of the bandwidth issues article to learn more about it.
2. Access the movie pinned story located at the bottom of the screen and click on the image to receive more information on the image through its caption.
3. Access the settings to see your bandwidth usage on your devices and to keep track for further usage.

### What 3 things needs to be changed

1. Create a front and back button that allows the user to go back or move to the next screen in the app.
2. Creating a home screen button which allows the users to go back to the homescreen at any time while using the app.
3. Creating a favorites button which allows users to favorite any articles they find interesting which they refer back to later in the app.

### What 3 things need to be kept on the app

1. Keep the screen layouts as they are which would make it easier for all types of users to access.
2. Keep the settings the same and the location of the settings in the top right of the app which the users will be able to access easily.
3. Keeping the pinned stories or articles at the bottom of the screen in which the users can access to more articles of their choosing while in using the app.
